

The future is here with open-loop contactless EMV cards (Mastercard PayPass, Visa payWave). Ticket buying can be so much faster and easier, when you don't have to use a webshop or even a mobile application. With our EMV certified validators you can just enter the vehicle and Tap & Go. It is quick, convenient and secure way to travel and Ridango can even calculate the best price for your rides automatically. You'll never have to think about buying tickets again!

RIDANGO MAKES CITIES A BETTER PLACE TO LIVE IN!

Ride & Go!

One-stop shop for transport operators

Ridango is a one-stop shop for transport operators and agencies. It does not matter if you are small or large – our scalable account based ticketing and RTPI solutions provide smooth and easy travel and seamless hassle free ticketing management for the operators.

Ridango helps transport operators to deliver nowadays ticketing and real-time passenger information solutions.

We are changing last century's expensive and slow business model (buying infrastructure, operating closed-loop offline ticketing with no cross-usability) by providing full operations with account based ticketing, real-time passenger information, fleet and traffic control, but also helpdesk and clearing services. We are ready for contactless EMV payments, that will revolutionize the way tickets are bought in public transportation. Contactless bankcard based ticketing helps to increase seamless travel experience and reduce card handling costs. Ridango is a technology provider as well as service operator for ticket and travel card sales and distribution.

Highlights:

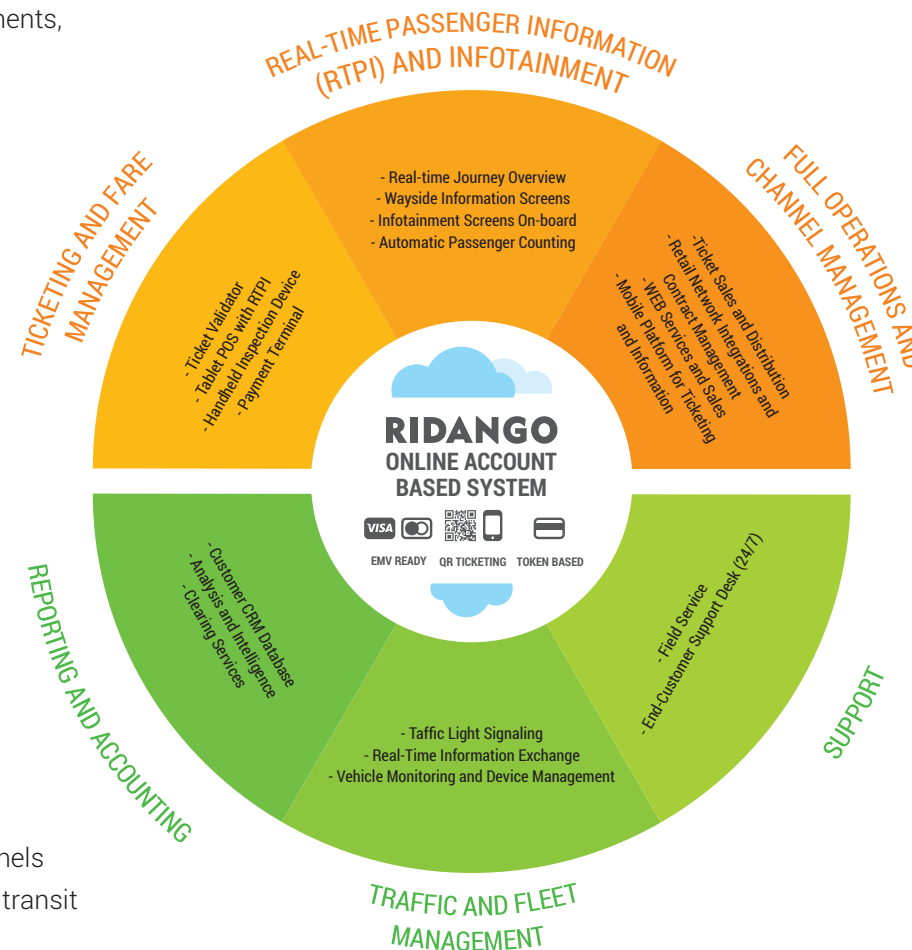

- 100 million passenger travels per year
- 700 thousand active contactless travel cards
- 1500 vehicles under management

Account based online ticketing

Account based ticketing is the only ticketing solution, that is cost effective, scalable and provides high comfort and seamless travel experience for the customers. Ridango offers fully configurable system with different fare types and mediums, flexible payment possibilities and best fare calculation.

- Mobile ticketing

Our applications serve as sales and real-time journey information channels for travellers. Through mobile applications is possible to buy tickets on transit card, QR-code or top-up the e-purse.

Real-time Passenger Information (RTPI)

When does bus arrive? Is it on time and which route it drives? Ridango RTPI solution provides all that information and so much more. It also includes on-board, platform and sideway infotainment, as well as mobile and web applications.

Fleet and Traffic Management

Vehicle tracking enables to see their location and device status in real-time. It also provides information to the driver about schedule deviations. Other supporting systems (APC, traffic light priority etc.) help transit agencies to plan and manage smooth local public transport

Full operations

Ridango provides transport operator more time to deal with their core business and allows technical and operational work to be outsourced. It means operating on behalf of a transit agency in ticket sales and distribution, 24/7 helpdesk and money clearing.
