

Solution description.

The solution 18-8-3R-RI-FACC based on a 8 channel recorder with a 7" Quad monitor.
 The 6 cabin cameras is monitoring the cabin area and is a nearly full monitoring of the passenger area in the bus .
 Driver monitor can be set to show the 6 recorded cameras in a live show.
 The two recorded door cameras will be shown on the monitor in split screen at door open.
 The Front camera is recorded at all times and not shown on the monitor.
 As standard in this solution, the rear view camera is an inside mount model and can be recorded.
 The rear view camera can be changed to an outside mount model depending on bus model.

Function description.

Monitor turned off or show live show while driving.
 Cabin Camera 1-2-3-4-5-6-7 will be recorded.
 Door Camera 4-6 will be shown at doors open on split screen.
 Rear View Camera 8 displayed on full screen by Reversing.
